To Our Valued Customers

Packaging and Packaging Waste Regulation (PPWR)

Sustainable Packaging Solutions in the Industrial Supply Chain

As a company in the industrial trade sector, we are responsible for providing efficient and sustainable packaging solutions throughout complex supply chains. In accordance with the European Union's **Packaging and Packaging Waste Regulation (PPWR),** we are implementing targeted measures to reduce packaging waste and promote the circular economy.

We confirm that, to the best of our current knowledge, our packaging solutions comply with the currently applicable requirements of the **PPWR** Regulation **(EU) 2025/40**.

An Overview of Our Measures

1. **Optimization of transport and industrial packaging**
   We continuously analyze our packaging systems (e.g., pallets, outer packaging, protective materials) to reduce material usage and volume. In doing so, we pay particular attention to requirements for transport safety and product protection in the B2B sector.
   This has led, for example, to the use of even more resource-efficient and environmentally friendly packaging made from corrugated cardboard containing 30% grass, known as "GreenCor." This reduces energy and water consumption!

2. **Standardization and Recyclability**
   Our packaging is increasingly standardized and designed to meet the PPWR requirements for recyclability. It is manufactured primarily from **FSC-certified corrugated cardboard**, which is nearly **100% recyclable**. The EPAL Euro pallets we use also meet the PPWR requirements and are generally suitable for material recovery and recyclable within existing recycling systems. We prioritize single-material packaging and reduce the use of composite materials wherever technically feasible.

3. **Increasing the Recycled Content**
   We actively promote the use of recycled materials in transport and protective packaging, provided this meets the quality and safety requirements of our products. The current recycled content rate for cardboard packaging ranges from 80 to 100%. For plastics such as LDPE films or shipping bags, this rate ranges from 50 to 99%. The use of recycling-friendly printing inks and adhesives further ensures a high recycling rate.

Registration and Documentation
Proper registration has been completed in the LUCID Packaging Registry.
The packaging used complies with the following requirements:
- EU Packaging Regulation (PPWR)
  Packaging Directive EC No. 94/62/EC
- REACH EC No. 1907/2006 (SVHC substances, as of February 2026)
  No reportable concentrations >0.1%, no exceptions applied.
- PFAS: No substances from this group are used based on current knowledge

Collaboration Along the Supply Chain

Implementing the PPWR in an industrial setting requires close collaboration. Therefore, we actively coordinate with manufacturers, logistics service providers, and customers to jointly develop and implement sustainable packaging solutions.

Our Commitment

We view the PPWR not only as a regulatory obligation but also as an opportunity to make processes more efficient, conserve resources, and ensure sustainable value creation in the long term.

We are happy to provide further information about our packaging concepts and sustainability measures.
